Research Statement

My interest focuses broadly in the application of artificial intelligence and machine learning techniques in the context of cybersecurity. My focus ranges from privacy & security, accountability, and the sociotechnical aspect of cybersecurity such as misinformation, censorship, and cyberbullying. I am passionate in taking advantage of state-of-the-art Artificial Intelligence technologies to Computer Security problems.

Education

Universitas Negeri Semarang, BSc in Computer Science 2023 – 2027 (expected)

- Overall GPA: 3.92/4.0 (Transcript)
- Major GPA: 3.92/4.0
- **Coursework:**

Operating Systems (A), Algorithms and Programming (A), Introduction to Computer Science (A), Computer Architecture and Organization (AB), Computational Logic (A), Data Structures (A), Algorithm Analysis (A), Human-Computer Interaction (A), Computer Networks (A), Discrete Mathematics (A), Database Systems (A), Formal Languages and Automata Theory (A), Artificial Intelligence (A), Numerical Methods (A), Object-Oriented Programming (A), Image Processing (A), Software Engineering (A), Information Technology Research (AB), Compiler Design (AB).

Research Experience

System and AI Research Training Program (SYAIR) Aug 2025 – Dec 2025

- International research training program instructed by **Prof. Haryadi Gunawi**, University of Chicago
- Selected 50 of the best student researchers in the Computer Science field nationally.
- Reviewed more than 10 scholarly papers presented at leading computer science conferences, including but not limited to ACM CCS, NDSS and EuroS&P.
- Analyzed codebases that are available from the Supplementary Material of reproducible conference paper.
- Successfully replicated and comprehensively comprehended the complete implementation of a conference paper regarding backdoor purification on malware classifiers via fine-tuning method in the Computer Security field.

Projects

Ngiprit Money Github ↗

- Developed a web interface to keep track of transactions, debts, receivables, and its relevant statistics.
- The project is comprised of over **3,000 LOCs** without counting the overhead that Laravel provides.
- The application can be used freely under the version 3.0 of the GNU Affero General Public License.
- Tools Used: **Laravel, React, TailwindCSS, ChartJS, Date-fns, PostgreSQL**

License Plate Extractor Kaggle ↗

- Created a deep learning model, allowing users to extract the text from a picture containing a license plate.
- The project is trained under Kaggle's T2 GPU's, with the codebase spanning over **740 LOC's**.
- The source code is available publicly under the 2.0 version of the Apache License.
- Tools Used: **PyTorch, YOLO, Pandas, Matplotlib**

Strengthened AES-128 Encryptor Github ↗

- Scaffolded a single-page web application that provides an implementation of AES-128 encryption alongside a reproduction of a research article that aims to strengthen the AES system by using novel S-Boxes.
- Designed the underlying AES-128 logic with TypeScript's standard library without any external libraries.

- Provided the logic for generating AES keys, the encryptor-decryptor mechanic, dynamic AES S-Box usage, and relevant testing environments using Vitest.
- Overall source code length is over **2,500 LOC's** without counting Vite's React initialization overhead.
- The implementation is created with React, deployed with Cloudflare Pages, and is publicly available for use under the Apache 2.0 License.
- Tools Used: **TypeScript, React, TailwindCSS, Vitest, Cloudflare Pages**

Toy 16-bit RSA Encryptor

[Github](#)↗

- Built a simple web interface that provides an example of how RSA encryption works.
- Designed the underlying RSA logic with TypeScript's standard library without any external libraries.
- Constructed the logic for generating RSA-relevant variables, RSA keys, and the encryptor-decryptor mechanic.
- Overall source code length is over **230 LOC's** without counting Vite's React initialization overhead.
- The implementation is created with React, deployed with Cloudflare Pages, and is made publicly available under The Apache 2.0 License.
- Tools Used: **TypeScript, React, Cloudflare Pages**

Technical Skills

Languages: C + +, Python, TypeScript, LaTeX

Operating System: Windows, Debian WSL, Ubuntu

Cloud Platform: Digital Ocean, Chameleon Cloud

Embedded Systems Hardware: ESP32, Orange Pi

Machine Learning: PyTorch

Web Development: React, TailwindCSS, Laravel

Desktop Application: Tauri

Database System: PostgreSQL, SQLite

Language Proficiency

Indonesia Language

June 2022

Mother tongue

UKBI: 387/800 (Madya)

English

June 2022

EFSET: 82/100 (CEFR C2)

Certification & Training

- Cisco Networking Academy Certified Computer Networking Skills (2024)
- ANC Japan's Japanese Language Course (2025)
